ONE MARITIME DATA STANDARD

Optimum efficiency in the maritime supply chain

One Maritime Data Standard (OMDS) is aiming to simplify the data landscape of the Dutch maritime sector by recording and electronic exchange of product and trade data.

Technical information, import and export documentation, and other data regarding parts and goods provide the basis for calculations, transactions and logistics within the chain. For data exchange, OMDS selected 2BA.

Using the 2BA platform, manufacturers, suppliers, data users can supply and exchange up–to–date product and trade information.

OMDS focuses on reducing failure costs and eliminating unnecessary process steps incurred when duplicating the input of trading data about the components and parts that are integrated into the ship.

It reduces the costs in supply chain management and increases both speed and efficiency within the maritime industry.

OMDS uses the 2BA platform: the ultimate central product database for your industry!

For suppliers

- ✓ Added marketing exposure
- ✓ Improved findability
- ✓ E-commerce support
- ✓ Increased efficiency
- ✓ Decreased costs
- ✓ Compliance with guidelines
- ✓ Improved data quality

For data users

- ✓ Direct access to millions of products
- ✓ Extensive selection and filter options
- ✓ Up-to-date product and price information
- ✓ 24/7 online availability
- ✓ Reduce failure costs
- ✓ Compatible with ERP systems
